

Project: Campus Opportunity Discovery Platform (MVP)

Project Title: Nexus: Opportunity Discovery Platform

Author: Raghav Gidholia

Timeline: May 29, 2026 – June 13, 2026

Status: Completed for Submission

1. Problem Discovery & Root Cause Analysis

The Problem:

Campus opportunity discovery is deeply fragmented across unauthorized WhatsApp groups, emails, flyers, and word-of-mouth. Highly motivated Senior Undergraduates are experiencing severe "Information FOMO," frequently missing career-critical internship deadlines and specialized workshops because relevant notifications get buried in general chat clutter.

The Root Cause:

Information is currently broadcasted indiscriminately without structured classification (such as target branch, eligibility criteria, or graduation year). This creates a massive information bottleneck: high cognitive overload for students and low-quality, scattered visibility for event organizers.

2. User Personas

Primary Consumer: The Goal-Oriented Senior Undergraduate

- **Context:** Under immense career pressure; actively hunting for internships, placement preparation workshops, and high-signal corporate competitions.
- **Pain Points:** Time wasted filtering through casual club recruitment posts or first-year events; high anxiety over missed application deadlines.
- **Core Need:** A highly personalized, distraction-free channel featuring opportunities matched strictly to their eligibility profile.

Primary Provider: The Overworked Student Leader / Organizer

- **Context:** Responsible for driving registrations and attracting high-quality attendees for specialized events.
- **Pain Points:** Posting in massive, multi-batch WhatsApp groups delivers low conversion and frustrates the broader student body.
- **Core Need:** A direct, structured distribution tool that ensures their post reaches eligible, motivated senior students.

3. User Journeys

Student Onboarding & Discovery Loop

- **Entry:** Student logs in via Campus Single Sign-On (SSO) to verify authentic student status
- **Profile Creation (Data Layer):** * Form prompts: Academic Year (e.g., 4th Year UG), Major/Branch (e.g., Computer Science), Current CGPA, and Skills/Interests (e.g., UI/UX, Data Science, Core Placement).
- **The Logic Gate:** System matches profile tags against the active database of opportunities.
- **Feed Landing:** User is dropped into a clean, chronological feed displaying *only* opportunities they are eligible for.

- **Action:** User clicks on an internship post → Reads clear metadata block (Deadline, Stipend, Criteria) → Clicks native "Apply Now" button → Application submitted instantly using profile data.

Organizer Publishing Loop

- **Authentication:** Approved club leaders log into the organizational portal dashboard.
- **Creation:** Clicks "Post New Opportunity".
- **Publishing:** System calculates target reach and publishes to matching feeds instantly
- **Structured Enforcements:** The form forces the organizer to select hard parameters:
 - Strict Expiration Date/Time.
 - Target Batches (Checkboxes: 1st Year, 2nd Year, 3rd Year, 4th Year).
 - Eligible Branches (Dropdown multi-select).
 - Minimum CGPA Cutoff (Slider tool).

4. MVP Scope (MoSCoW Framework)

Feature Name	Release Tier	Product Description & Justification
1. Student Profile Setup	Must Have	Collects User Major, Graduation Year, CGPA, and Interests during onboarding. This forms the baseline data layer needed to filter out irrelevant noise.
2. Organizer Publishing Form	Must Have	A standardized template enforcing input of Title, Description, Deadline, and mandatory Eligibility tags (e.g., "CS/EE only", "Min 8.0 CGPA").
3. The "Zero-Noise" Feed	Must Have	The main landing tab for students. Displays a clean,

Feature Name	Release Tier	Product Description & Justification
		chronological timeline of opportunities that match their profile, with clear expiration counters.
4. In-App Registration Workflow	Must Have	A single-click "Register" button native to the app. Reduces drop-off rates compared to external links and captures clean application data.
5. AI Recommendation Engine	<i>Should Have</i>	Future iteration to predict and surface opportunities based on historical user behavior (Excluded from MVP to reduce development time).
6. Organizer Analytics Portal	<i>Could Have</i>	Basic performance charts tracking views vs. click-through rates (Nice to have, but organizers can track registrations manually for V1).

5. Measurable Success Indicators

- **North Star Metric:** *Monthly Successful Applications Completed.* (Measures tangible value delivery through successful marketplace matching.)
- **Core Engagement Metric:** *Daily Active Users (DAU) / Weekly Active Users (WAU) Ratio.* (Tracks stickiness and check-in habits during peak hiring seasons.)
- **Provider Success Metric:** *Average Registration Conversion Rate per Post.* (Total registrations divided by total post views, demonstrating value to organizers.)

6. Marketplace Design & Solving the Cold-Start Problem

Supply-Side Strategy

- **The Manual Hack:** Before launching to students, the PM team will manually scrape public campus emails and open placement notices for 2 weeks to seed the platform with 30+ active, high-value senior opportunities.
- **Organizer Incentive:** Partner with the top 3 highest-impact professional societies on campus (e.g., Placement Cell, Coding Clubs, Consulting Club) and give them exclusive early access to post. We pitch them: *"Stop dealing with 500 unread WhatsApp questions; manage your entire applicant roster from one clean Excel export on our dashboard."*

Demand-Side Growth Strategy

- **The "FOMO" Launch Campaign:** Market the app specifically during the peak internship/placement month.
- **Exclusive Channels:** Coordinate with the placement cell to release a critical, highly-anticipated preparatory mock-test schedule *exclusively* via the platform's registration button. This forces immediate organic downloads from the primary target demographic (Senior UGs).

7. Formulate the Growth & Adoption Strategy

High-Signal Demand Capture

- **Target Audience:** Senior undergraduates and pre-final-year students facing immediate placement or resume-building pressure.
- **Acquisition Channel:** Direct outreach through placement coordinators, department CRs (Class Representatives), and academic notice boards.

- **The Hook:** "Stop digging through 40+ unindexed WhatsApp groups for career-critical updates. Enter your major, CGPA, and year once, and receive a zero-noise opportunity feed matched to you. "
- **Outcome:** Rapid acquisition of highly active, motivated student profiles who complete their demographic details to unlock their matched feeds.

Provider Monetization of Attention

- **Target Audience:** Campus club presidents, activity organizers, and project leads.
- **The Pitch:** We present the existing, highly segmented student user base to organizers. *"Instead of spamming 2,000 random students via email blasts and getting a 2% turnout, use our Publishing Form to publish your event directly to the screens of the exact 412 students who meet your selection criteria."*
- **Outcome:** Organizers adopt the platform because the target demand is already aggregated and waiting. Manual scraping is phased out as organizers take over native publishing.
